

Week -2 / Day -2 / Postman Response

1. Scenario 1: Text to Audio

The screenshot displays the Postman interface for a REST client. At the top, a collection of requests is visible, including 'POST S01', 'GET http', 'POST S01', 'POST S03', 'GET http', and 'POST Sec'. The selected request is 'S01-Text to Audio', which is a POST request to the endpoint 'https://api.groq.com/openai/v1/audio/speech'. The request body is formatted as JSON and contains the following details:

```
{
  "model": "canopylabs/orpheus-v1-english",
  "input": "[Cheerful] vanakkam. I am a language model created by Groq. I am here to help you with any questions you may have. How can I assist you today?",
  "voice": "diana",
  "response_format": "wav"
}
```

The response status is '200 OK', with a response time of '1.59 s' and a size of '402.36 KB'. Below the response status, there are tabs for 'Hex', 'Preview', and 'Visualize'. The 'Preview' tab is active, showing a large black rectangular area representing the audio file. At the bottom of this area is a media player control bar with a play button, a progress bar showing '0:00 / 0:08', a volume icon, and a settings icon. On the right side of the interface, there is a 'New Chat' section with a 'Start using' button and a note about the plan. Below this, there is a 'Describe what you want to use Agent' section with an 'Auto' dropdown menu.

2. Scenario 2: Multilingual

Response in English

The screenshot displays a REST client interface for a POST request to the OpenAI API endpoint `https://api.groq.com/openai/v1/chat/completions`. The request body is a JSON object with two roles: a system role instructing the assistant to respond in the user's language, and a user role asking for an explanation of API. The response is a 200 OK status with a JSON body where the assistant role provides a detailed explanation of what an API (Application Programming Interface) is, describing it as a set of rules and protocols for communication between different software systems.
