

Retrieval Pipeline

Scenario 1: Registration Module (10 Test cases)

Langflow Screenshot:

Step 1: Search Query with Registration test cases

The screenshot shows a Langflow workflow on a grid background. On the left, the 'MistralAI Embeddings' component is configured with the model 'mistral-embed' and a placeholder for the 'Mistral API Key'. It has an output labeled 'Embeddings'. On the right, the 'MongoDB Atlas' component is configured with a placeholder for the 'MongoDB Atlas Cluster URI', a placeholder for the 'MongoDB Atlas Combined Client Certificate', 'db_testcases' as the 'Database Name', 'test_cases' as the 'Collection Name', and 'vector_index' as the 'Index Name'. It has an input 'Ingest Data' and an output 'Embedding'. A 'Search Query' input is set to 'Registration TestCases'. A line connects the 'Embeddings' output of the MistralAI component to the 'Embedding' input of the MongoDB Atlas component. A 'Play' button is in the top right, and an 'Inspect output' button is at the bottom right.

Step 2 : Set 10 count in MongoAtlas controls

The screenshot shows the 'MongoDB Atlas' configuration window for a Vector Store. The title bar says 'MongoDB Atlas ID: MongoDBAtlasVector-KFZS8'. The subtitle is 'MongoDB Atlas Vector Store with search capabilities'. The window contains a table with configuration options:

Show	Field Name	Description	Value
	Insert Mode	How to insert new documents into the collection.	append
	Embedding		
	Number of Results	Number of results to return.	10
	Index Field	The field to index.	embedding
	Filter Field	The field to filter the index.	The field to index. something...
	Number of Dimensions	Embedding Context Length.	1536
	Similarity	The method used to measure the similarity between vectors.	cosine
	Quantization	Quantization reduces memory costs converting 32-bit floats to smaller data types	Select an option

A 'Close' button is at the bottom right.

Step 3: 10 Test cases in the response
